

skincare-system

Personalized skincare recommendations using Python Project by Asma Ahmed

About :

- Builds custom skincare routines
- Uses rules + sample dataset
- Matches product ingredients to skin concerns
- Generates a custom AM/PM routine

```
recommender.py ×
engine > recommender.py > ...
1  from .rules import RULES, CONCERN_ADDONS
2
3  def recommend(skin_type, concern, avoid_alcohol=False):
4      base_steps = RULES.get(skin_type, ["gentle cleanser", "moisturizer", "spf 30+"])
5      addons = CONCERN_ADDONS.get(concern, [])
6      routine = base_steps + addons
7
8      if avoid_alcohol:
9          routine.append("note: avoid denatured alcohol in ingredient lists")
10
11     return routine
12
```

```
rules.py ×
engine > rules.py > RULES
1  RULES = {
2      "dry": [
3          "gentle cleanser",
4          "hyaluronic acid serum",
5          "ceramide moisturizer",
6          "spf 30+"
7      ],
8      "oily": [
9          "gel cleanser",
10         "niacinamide serum",
11         "lightweight moisturizer",
12         "spf 30+"
13     ]
14 }
```
